A TIMELY CONVERSATION

Rural care. A new opportunity.

Rural Health Transformation Program

The Medicare & You 2027 excerpt highlights national investment in rural access, facilities and health technology.

For your clinic, this is a timely reason to evaluate care between visits, technology readiness and chronic-care support.

Contact your state health department to learn about local initiatives and eligibility.

Technology-supported care

The handbook also introduces ACCESS, a voluntary Original Medicare model for technology-supported chronic care. It is separate from routine APCM, CCM and RPM billing.

Federal programs provide context for planning. Funding and participation follow their own eligibility requirements.

YOUR NEXT STEP

Let's explore what fits.

A 20-minute consultation

- Your patients, current services and staff capacity.
- Your EHR, documentation and clinical workflow.
- Service options, revenue opportunities and program costs.

ROYAL ORLEANS

HEALTH AND WELLNESS

Advance Remote Care Solutions

APCM / CCM / RPM

Support patients.
Extend your team.
Strengthen your practice.

Explore care-management services and recurring revenue opportunities for your rural clinic.

Representing HealthSnap products and services

THE NEED. THE RESPONSE.

More support. Less to build.

01 Close follow-up gaps

Scheduled outreach, care coordination and appropriate home monitoring help your team stay connected with patients between visits.

02 Extend staff capacity

HealthSnap care-management staff can support agreed activities so your clinic can explore these services without building a separate department.

03 Explore recurring revenue

Eligible APCM, CCM and RPM services may generate additional reimbursement. Review expected collections, payer requirements and full program costs to assess the net benefit.

No platform hosting fee

Under the proposed offering. Service scope and pricing are reviewed before launch.

START WITH THE RIGHT SERVICE

One clinic. Options that fit.

APCM

Advanced Primary Care Management

Ongoing primary care management through a monthly bundle. Supports coordinated, patient-centered care with no monthly minute threshold for APCM billing.

CCM

Chronic Care Management

Time-based care coordination for eligible patients with two or more qualifying chronic conditions. Supports care-plan follow-through, medication coordination and documentation.

RPM

Remote Patient Monitoring

Connected devices share home readings such as blood pressure, weight or glucose with the care team. Cellular device options and shipping support can simplify patient setup.

Start with one service or an appropriate combination. APCM and CCM are generally alternative billing approaches for the same patient and month. Review RPM combinations separately.

YOUR CONNECTION TO HEALTHSNAP

A clear role. Shared purpose.

Royal Orleans Health and Wellness

We represent HealthSnap products and services. We introduce solutions, discuss your goals and coordinate consultations, demonstrations and next steps with the HealthSnap team.

HealthSnap

Provides the contracted technology and care-management support, including connected devices, care-navigation services and workflow tools as selected.

Your clinical team

Guides patient care and retains clinical oversight. Responsibilities, EHR compatibility, patient eligibility and escalation pathways are reviewed before launch.

Services follow applicable consent, documentation and payer requirements. Monitoring is not an emergency-response service. Independent of Medicare, CMS and state health departments.
